

Evoke Pharma Expands IP Portfolio with Addition of Canadian Patent Covering GIMOTI Method of Use

July 6, 2022

SOLANA BEACH, Calif., July 06, 2022 (GLOBE NEWSWIRE) -- Evoke Pharma, Inc. (NASDAQ: EVOK), a specialty pharmaceutical company focused primarily on treatments for gastrointestinal (GI) diseases with an emphasis on GIMOTI® (metoclopramide) nasal spray, today announced that the Canadian Intellectual Property Office granted the Company a key patent for its previously submitted application (CA 2984736) "Nasal Formulations of Metoclopramide." This new patent corresponds to the two other U.S. Food and Drug Administration (FDA) Orange Book-listed patents under the same title that expire in 2029 and 2030, respectively. The patent covers the methods of use for nasal delivery of GIMOTI's base formulation, metoclopramide, for treating diabetic gastroparesis. This Canadian patent expires in 2029.

This approval follows the grant of market exclusivity from the U.S. FDA for GIMOTI®, which the Company announced in April 2022. Evoke currently has exclusive marketing rights for three (3) years from the original approval date under the Hatch-Waxman Act to protect GIMOTI® from generic drug competition.

"We are extremely pleased to expand our intellectual property landscape for GIMOTI® and it is exciting to receive patent protection in another potential market for our novel gastroparesis treatment solution," commented Matt D'Onofrio, MBA, Chief Business Officer of Evoke Pharma. "Evoke's patent estate represents a significant asset related to our product, which is designed to provide effective gastroparesis management via a distinct nasal route of administration. We remain highly motivated to fulfill our commitment to people suffering from diabetic gastroparesis by positioning GIMOTI® as the standard of care and making it accessible to all in need," he added.

About Evoke Pharma, Inc.

Evoke is a specialty pharmaceutical company focused primarily on the development of drugs to treat GI disorders and diseases. The company developed, commercialized and markets GIMOTI, a nasal spray formulation of metoclopramide, for the relief of symptoms associated with acute and recurrent diabetic gastroparesis in adults.

Diabetic gastroparesis is a GI disorder affecting millions of patients worldwide, in which the stomach takes too long to empty its contents resulting in serious GI symptoms as well as other systemic complications. The gastric delay caused by gastroparesis can compromise absorption of orally administered medications. Prior to FDA approval to commercially market GIMOTI, metoclopramide was only available in oral and injectable formulations and remains the only drug currently approved in the United States to treat gastroparesis. Visit www.EvokePharma.com for more information.

About Gimoti™ (metoclopramide) nasal spray

GIMOTI is indicated for the relief of symptoms in adults with acute and recurrent diabetic gastroparesis.

Important Safety Information

WARNING: TARDIVE DYSKINESIA

- Metoclopramide can cause tardive dyskinesia (TD), a serious movement disorder that is often irreversible. The risk of developing TD increases with duration of treatment and total cumulative dosage.
- Discontinue GIMOTI in patients who develop signs or symptoms of TD. In some patients, symptoms may lessen or resolve after metoclopramide is stopped.
- Avoid treatment with metoclopramide (all dosage forms and routes of administration) for longer than 12 weeks because of the increased risk of developing TD with longer-term use.

GIMOTI is not recommended for use in:

- Pediatric patients due to the risk of developing tardive dyskinesia (TD) and other extrapyramidal symptoms as well as the risk of methemoglobinemia in neonates.
- Moderate or severe hepatic impairment (Child-Pugh B or C), moderate or severe renal impairment (creatinine clearance less than 60 mL/minute), and patients concurrently using strong CYP2D6 inhibitors due to the risk of increased drug

exposure and adverse reactions.

GIMOTI is contraindicated:

- In patients with a history of tardive dyskinesia (TD) or a dystonic reaction to metoclopramide.
- When stimulation of gastrointestinal motility might be dangerous (e.g., in the presence of gastrointestinal hemorrhage, mechanical obstruction, or perforation).
- In patients with pheochromocytoma or other catecholamine-releasing paragangliomas. Metoclopramide may cause a hypertensive/pheochromocytoma crisis, probably due to release of catecholamines from the tumor.
- In patients with epilepsy. Metoclopramide may increase the frequency and severity of seizures.
- In patients with hypersensitivity to metoclopramide. Reactions have included laryngeal and glossal angioedema and bronchospasm.

Potential adverse reactions associated with metoclopramide include: Tardive dyskinesia (TD), other extrapyramidal effects (EPS), parkinsonism symptoms, motor restlessness, neuroleptic malignant syndrome (NMS), depression, suicidal ideation and suicide, hypertension, fluid retention, hyperprolactinemia, effects on the ability to drive and operate machinery. Most common adverse reactions (≥5%) for GIMOTI are: dysgeusia, headache, and fatigue. These are not all of the possible side effects of GIMOTI. Call your doctor for medical advice about whether you should take GIMOTI and the possible risk factors and side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.

Safe Harbor Statement

Evoke cautions you that statements included in this press release that are not a description of historical facts are forward-looking statements. In some cases, you can identify forward-looking statements by terms such as “may,” “will,” “should,” “expect,” “plan,” “anticipate,” “could,” “intend,” “target,” “project,” “contemplates,” “believes,” “estimates,” “predicts,” “potential” or “continue” or the negatives of these terms or other similar expressions. These statements are based on the company’s current beliefs and expectations. These forward-looking statements include statements regarding: the expected benefits from market exclusivity for GIMOTI and expectations on the scope of intellectual property protection; Evoke’s ability to capitalize on the gastroparesis market opportunity, including in potential new markets; the potential benefits of GIMOTI for patients with diabetic gastroparesis; and Evoke’s ability to increase access to of GIMOTI. The inclusion of forward-looking statements should not be regarded as a representation by Evoke that any of its plans will be achieved. Actual results may differ from those set forth in this press release due to the risks and uncertainties inherent in Evoke’s business, including, without limitation: Evoke’s ability to maintain intellectual property protection for GIMOTI; Evoke’s and EVERSAN’s ability to successfully drive market demand for GIMOTI; Evoke’s ability to maintain Medicare coverage in various jurisdictions; the COVID-19 pandemic may continue to disrupt Evoke’s and EVERSAN’s business operations impairing the ability to commercialize GIMOTI and Evoke’s ability to generate any product revenue; and other risks and uncertainties detailed in Evoke’s prior press releases and in the periodic reports it files with the Securities and Exchange Commission. You are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof, and Evoke undertakes no obligation to revise or update this press release to reflect events or circumstances after the date hereof. All forward-looking statements are qualified in their entirety by this cautionary statement. This caution is made under the safe harbor provisions of the Private Securities Litigation Reform Act of 1995.
