

Evoke Pharma, EVERSANA and The International Foundation for Gastrointestinal Disorders Announce Membership into IFFGD's Industry Council

June 29, 2021

Extends commitment toward supporting patients experiencing Diabetic Gastroparesis through focused collaborations and Sponsorship of the 30th Anniversary Digestive Health Virtual Walk

SOLANA BEACH, Calif., CHICAGO, and MOUNT PLEASANT, S.C., June 29, 2021 (GLOBE NEWSWIRE) -- Evoke Pharma, Inc. (NASDAQ: EVOK), a specialty pharmaceutical company focused on treatments for gastrointestinal (GI) diseases, EVERSANA™, a leading provider of global commercial services to the life science industry, and The International Foundation for Gastrointestinal Disorders (IFFGD), today announced Evoke's membership into IFFGD's Industry Council. Evoke will join a likeminded group of organizations and brands focused on bettering patients affected by GI disorders. As part of the Industry Council, Evoke will participate in biannual council meetings to gain industry insights and provide feedback on future plans for IFFGD.

In addition to the Industry Council, Evoke is excited to sponsor the IFFGD's upcoming 30th Anniversary Digestive Health Virtual Walk in August 2021 during Gastroparesis Awareness Month. This walk is a unique fitness event which will provide participants with an opportunity to engage at their own pace and as their health and schedules permit. To honor the thirty years of the IFFGD's existence, the overall campaign goal is for all participants to collectively walk 10,950 miles over two weeks. Goals will also go beyond physical fitness by encouraging participants to participate in activities that promote general wellness such as scheduling a doctor's appointment, trying a new gut friendly recipe or starting a log of their meals and/or symptoms.

"We appreciate Evoke Pharma joining in our efforts to support patients with digestive diseases, specifically those afflicted with gastroparesis. As there has been no new and novel treatments for this debilitating disease on the market in over 40 years, our community is seeking new options and support for patients," stated Ceciel T. Rooker, President of IFFGD. "We recognize the significant unmet medical need that these patients have for improved treatment options. We look forward to Evoke's contribution to our cause as we partner to help those in need."

"We are excited to further extend our commitment to improving the lives of those affected by gastroparesis through our membership into the IFFGD's Industry Council," commented Matt D'Onofrio, Evoke Pharma Chief Business Officer. "The IFFGD provides an invaluable service to those impacted by chronic digestive disorders by raising awareness, improving education, and promoting research into treatments and cures. We look forward to working closely with an organization that is aligned with our mission, such as the IFFGD, and sponsoring its upcoming 30th Anniversary Digestive Health Virtual Walk."

About Gimoti™ (metoclopramide) nasal spray

GIMOTI is indicated for the relief of symptoms in adults with acute and recurrent diabetic gastroparesis.

Important Safety Information

BOXED WARNING: TARDIVE DYSKINESIA

- **Metoclopramide can cause tardive dyskinesia (TD), a serious movement disorder that is often irreversible. The risk of developing TD increases with duration of treatment and total cumulative dosage.**
- **Discontinue GIMOTI in patients who develop signs or symptoms of TD. In some patients, symptoms may lessen or resolve after metoclopramide is stopped.**
- **Avoid treatment with metoclopramide (all dosage forms and routes of administration) for longer than 12 weeks because of the increased risk of developing TD with longer-term use.**

GIMOTI is not recommended for use in:

- **Pediatric patients due to the risk of developing tardive dyskinesia (TD) and other extrapyramidal symptoms as well as the risk of methemoglobinemia in neonates.**
- **Moderate or severe hepatic impairment (Child-Pugh B or C), moderate or severe renal impairment (creatinine clearance less than 60 mL/minute), and patients concurrently using strong CYP2D6 inhibitors due to the risk of increased drug exposure and adverse reactions.**

GIMOTI is contraindicated:

- **In patients with a history of tardive dyskinesia (TD) or a dystonic reaction to metoclopramide.**
- **When stimulation of gastrointestinal motility might be dangerous (e.g., in the presence of gastrointestinal**

hemorrhage, mechanical obstruction, or perforation).

- In patients with pheochromocytoma or other catecholamine-releasing paragangliomas. Metoclopramide may cause a hypertensive/pheochromocytoma crisis, probably due to release of catecholamines from the tumor.
- In patients with epilepsy. Metoclopramide may increase the frequency and severity of seizures.
- In patients with hypersensitivity to metoclopramide. Reactions have included laryngeal and glossal angioedema and bronchospasm.

Potential adverse reactions associated with metoclopramide include: Tardive dyskinesia (TD), other extrapyramidal effects (EPS), parkinsonism symptoms, motor restlessness, neuroleptic malignant syndrome (NMS), depression, suicidal ideation and suicide, hypertension, fluid retention, hyperprolactinemia, effects on the ability to drive and operate machinery.

Most common adverse reactions (≥5% of patients in clinical studies) for GIMOTI were dysgeusia, headache, and fatigue. These are not all of the possible side effects of GIMOTI. This information should not take the place of you talking with your doctor or healthcare professional. If you have any questions about your condition, or if you would like more information about GIMOTI, talk to your doctor or pharmacist. Only you and your healthcare professional can decide if GIMOTI is right for you.

You report side effects related to Evoke Pharma products by calling 1-833-4-GIMOTI (1-833-444-6684) or emailing GIMOTImedinfo@evokepharma.com. If you prefer to report these to the FDA, either visit www.FDA.gov/medwatch or call 1-800-FDA-1088.

About Evoke Pharma, Inc.

Evoke is a specialty pharmaceutical company focused primarily on the development of drugs to treat GI disorders and diseases. Evoke developed GIMOTI, a nasal spray formulation of metoclopramide, for the relief of symptoms associated with acute and recurrent diabetic gastroparesis in adults.

Diabetic gastroparesis is a GI disorder affecting millions of patients worldwide, in which the stomach takes too long to empty its contents resulting in serious GI symptoms as well as other systemic complications. The gastric delay caused by gastroparesis can compromise absorption of orally administered medications. Prior to FDA approval to commercially market GIMOTI, metoclopramide was only available in oral and injectable formulations and remains the only drug currently approved in the United States to treat gastroparesis.
